

Increase protection.

Reduce reflection.

3M™ Glossy LR Protection Film

Protect your LCD screen. Enhance your view.

In business operations, LCD displays are exposed to harsh environments on a daily basis. Protecting displays from damage can save on both warranty and repair costs, which add up. And as mobile device use occurs in more settings, glare has become an increasing obstacle to consider.

New 3M™ Glossy LR Protection Film brings surface protection and viewing enhancement together. It offers a durable hardcoat to protect your display. At the same time, the new low-reflection coating improves your screen view, especially in environments where sunlight or bright lighting conditions typically disrupt screen readability.

3M™ Glossy LR Protection Film

Protecting expensive LCD displays from damage is just good business. And now, you can get glare out of the way too.

When you protect your LCD displays against damage, you're protecting your business too. 3M™ Glossy LR Protection Film can help save on costs for screen repairs or replacements and the lost time and productivity that inevitably go along with it.

3M™ Glossy LR Protection Film protects screens with a durable hardcoat that helps minimize scratching and scuffing. And it enhances your view too. The "LR" stands for low reflection because it actually reduces reflections, improves your viewing experience and protects your display all at once. Even in bright lighting conditions, devices fitted with the film offer a clearer screen view. 3M™ Glossy LR Protection Film applies easily and removes easily, leaving no residue. Place it on data capture devices, signature capture devices, navigation systems, mobile phones and more.

Bringing durable protection and viewing enhancement together

- Durable, scratch-resistant hardcoat – helps minimize minor scratches and scuffs
- Low reflection coating – provides clear, sharp display enhancement and ambient light management
- Glossy "LR" finish – enhances the viewing experience by providing a non-conductive, near color-neutral low-reflection surface
- Optically clear, ultra thin film – up to 93% transmission, keeps display bright with no color distortions
- Scotchgard™ easy-to-clean surface – even markers and ink pens wipe right off
- Easy on, easy off – easy to apply and removes easily, leaving no residue
